

Serial No. 10/605,814

AMENDMENT TO THE SPECIFICATION

Please replace paragraph 0033 with the following paragraph. The error that prompts this amendment was inadvertent. The amendment does not add any new matter because support for this amendment can be found at, among other places, the last sentence of this paragraph and Figure 10, which shows a support post 18a extending through three spacer sleeves 16a, 16b and 16c.

[0033] The length of the support posts 18 is a function of the length of the ~~support posts~~ spacer sleeves 16 and number of trays 12. The support posts 18 must be long enough to extend through more than one set of ~~support posts~~ spacer sleeves 16 in order to hold multiple trays 12 together. For example, in the four layer system illustrated in the figures and described in detail below, two sets of support posts 18a, 18b are used. The bottom set of support posts 18a are long enough to extend through two and one-half spacer sleeves 16, and the top set of support posts 18b are long enough to extend through about one and one-half spacer sleeves 16.
